## PROFESSIONAL EXPERIENCE

### Avoma

Frontend Developer (JUN 2022 - APR 2024)

Spearheaded development for **Avoma's Scheduler** (*Calendly & Chillipiper's competitor*) feature by

- Introducing various customizable **scheduling templates** with team collaboration
- Implementing a **router system to automate meeting assignments**, integrating seamlessly with CRM platforms
- Developing comprehensive **router reports** to monitor meeting metrics and user engagement, visualizing data via **Sankey Charts** and tabular views.
- Successfully replacing external dependencies with an **in-house calendar functionality**, enhancing reliability and control by more than **90%**
- Leading frontend development for **Scheduler's Chrome Extension**

*This feature significantly boosted user engagement and product visibility, resulting in over **14k+** meetings scheduled and **42k+** feature engagement to date.*

In addition,

- Implemented **AI-driven features** for faster and more accurate auto-filled data, refined existing features based on user feedback, and **collaborated with the design team** to adapt to evolving design requirements across the product suite
- **Revamped developer experience** by switching **legacy styling to Tailwind CSS**, transitioning class-based components to functional, and **enhancing reusability** with modular components, leading to increased efficiency and consistency in development

### Avo Automation

Product Engineer-Development (OCT 2020 - MAY 2022)

- Worked with the Avo Discover team as a lead developer to revamp the product from **Angular** to **React.js** from the ground up
- Collaborated in developing the React component library used across the organization's products, which is built using **Storybook** and wrapped around Microsoft's Fluent UI design system
- Created components for Avo Discover's desktop application using **Electron**

## LANGUAGES & TOOLS

React.js, React-Redux, Javascript, HTML & CSS, Tailwind, Git, Typescript, Scss, RadixUI

## PROJECTS

### Heiwa

[demo | github](#)

- A single platform to experience Color and Sound therapy. Built with React Hooks

### Kyupid

[demo | github](#)

- Visualizing user engagement data through MapboxGL

### RSS Reader

[demo | github](#)

- Web app that renders an RSS feed for a user to browse an RSS Feed

### Eden Onboarding Flow

[demo | github](#)

- Dynamic onboarding flow focusing on capturing the progress flow and responsiveness

## EDUCATION

Sahyadri College Of Engineering

BE Computer Science and Engineering

Mangalore, India

2016 - 2020, VTU
